

Antony Akinniranye

tonyakinn05@gmail.com | +1 (289) 314-2495 | [linkedin.com/in/tony-akinniranye](https://www.linkedin.com/in/tony-akinniranye)

TECHNICAL SKILLS

Programming Languages: C++, Python, Java, C, HTML, CSS, JavaScript, Dart

Tools & Tech: Linux, Git, Android Studio, NumPy, Pandas, Pytorch, Power Bi

Core Competencies: Full-Stack Development, Data analysis and processing, UI/UX, Responsive design

EDUCATION

Ontario Tech University, B.S. in Computer Science Co-op

Sep 2023 – April 2024

Relevant Course Work: Scientific Data Analysis, Software Development & Integration, Data Structures and Algorithms,

Clubs: Ontario Tech Computer Science Club, Fighting Game Club

PROJECTS | Portfolio Website: [Tayoakin.me](https://tayoakin.me) | GitHub: <https://github.com/tonyraney>

Animal Classifier (AnimAI) | Full Pytorch ML pipeline | Convolutional Neural Network | Pytorch | multi-layer

- Collaborated on and developed a hierarchical multi-model animal classification system using Pytorch, routing images through specialist CNNs for improved prediction accuracy across multiple species and breeds.
- Built and trained convolutional models for coarse categories (e.g., mammals, birds) and fine-grained specialists (e.g., cat breeds, dog breeds, butterfly species) to enhance classification performance.
- Created a Gradio interface for interactive web-based predictions, enabling users to upload images and receive real-time classification results with confidence scores.
- Utilized Git for version control and collaborative workflows as part of a team-based machine learning project.

Meteorite Landings | Data Visualization Python | Pandas & GeoPandas | Matplotlib and Seaborn | GeoPandas

- Analyzed and visualized a large NASA meteorite landings dataset to uncover trends in impact frequency, geographic distribution, and mass characteristics using Python data science tools.
- Processed and cleaned raw CSV data with Pandas, handling missing values and preparing for meaningful analysis.
- Created compelling visualizations (e.g., distribution plots, trend charts) using Seaborn and Matplotlib to illustrate patterns over time and between regions.
- Performed geospatial mapping of meteorite landing locations with GeoPandas and Shapely, integrating shapefiles to map impacts by continent and analyze spatial trends.

Video Game Catalogue | Full-Stack App | Java | Swing UI | Maven | SQLite Database

- Collaborated on a team project to build a desktop video game catalogue application using Java and Swing for the graphical user interface.
- Designed and implemented core features including entire UI, form views for adding/removing games.
- Implemented dialog popups for user feedback, validation, and confirmation actions.
- Designed modular components and structured project files to improve maintainability and support future feature expansion.

WORK EXPERIENCE

Summer Student Groundskeeper | Otter Creek Co-operative Homes

June 2024 - July 2025

- Managed multiple projects which required planning, implementation, and maintenance. Optimizing task work by organizing a system workflow.

Food Service Aid | Taunton Mills

August 2021 - February 2023

- Communication: Accurately and promptly relaying and processing information to meet the customer's needs.
- Delivered high-quality customer service in a senior living environment quickly and efficiently.
